IP Audio Center

v2.0.2 Release Notes

New Features:

1. Added Broadcast Prompt Tone configuration for each group in the 'Groups' page.

2. Added SIP status subscription support for the operator master phone.

Improvements & Bug Fixes:

1. Updated system management interface (Port 9090) mode options:
   - Mode 1 renamed to Public Network Mode
   - Mode 3 renamed to LAN Mode
   - Mode 2 removed

2. Optimized audio playback source handling and playback duration control to resolve issues of truncated or duplicated audio.

3. Improved naming convention for downloaded recording files for better file management.

4. Optimized Redis interface and MQTT connection library to enhance system stability and resolve occasional device offline issues.

5. Improved display logic for SIP registration and trunk registration information.

6. Optimized outbound number display in API interfaces.

7. Disabled SIP ICE option for device SIP accounts to improve compatibility and stability.

8. Fixed an issue where the service failed to restart after uploading a license file.

9. Fixed issues related to NAT configuration.

10. Fixed a 500 error preventing Dispatch Console login when the associated WebRTC extension was deleted.
