

IP Audio Center

v2.0.3Release Notes

New Features:

1. Added support for task priority management.
2. Added a configurable jitter buffer to improve music playback reliability under unstable network conditions.

Improvements & Bug Fixes:

1. Fixed an issue where temporary music sources were not properly cleared, which could cause incorrect or mixed playback content.
2. Fixed an issue where audio content could be played more or fewer times than the configured number of repetitions.
3. Fixed an issue that could cause TTS or recorded audio files to fail during playback.
4. Fixed an issue where standard IP extensions were incorrectly granted paging permissions.
5. Optimized the handling logic for custom audio sources and fixed an issue where playback could not resume after a connection was interrupted.
6. Adjusted the video codec settings for Dispatch Console extensions and optimized video call parameters.
7. Fixed a call conflict that could occur when the Dispatch Console was logged in simultaneously on both desktop and mobile clients.
8. Fixed an issue that limited the number of groups that could be associated on the map configuration page.
