SAAD Tool v2.0.2.006

Release Notes

New Features:

Added a linkage settings interface (VI configuration and IPS configuration).

1. Audio settings: audio file upload and deletion, as well as playlist add, edit, delete, and display, all function correctly.
2. Scene preset options are configured and displayed correctly.
3. Strobe light configurations display correctly on the terminal after each option is set.
4. All scheduled task settings are configured and displayed correctly.
5. Holiday settings function correctly and display properly on the terminal interface.
6. Linkage settings (scene linkage, input settings, relay settings) function correctly and display properly on the terminal; volume configuration interface adjusted (added IPS editing).
7. Batch configuration of ambient noise compensation parameters for IPS series speakers is supported.
