

ZYCOO IP Audio Endpoint Devices

Release Note

2026.09

Corresponding Version:

SW15 SC15 SH30: v2.1.5 (v2 hardware version)

SC10: v1.1.5

SH10: v1.0.7

SL30: v1.1.4

SQ10(B&T): v2.1.4

X 10: v2.1.6 (v2 hardware version)

Improvements & Bug Fixes:

1. Optimized the scan interaction procedure for compatibility with SAAD software.
2. ONVIF supports microphone audio encoding configuration (visible after enabling the microphone option).
3. ONVIF backchannel supports adaptive PCMU and PMCA.
4. ONVIF supports interaction over port 80.
5. Added the network-caching parameter for music playback.
6. Optimized multicast parameters to resolve incomplete audio playback. (M100 v2.0.4 optimized multicast source handling.)
7. Fixed the issue where temporary volume set via the VC-Z01 volume controller could not be restored. (In VC-Z01 software v1.003, optimized single-trigger activation and locked status LED behavior.)
8. Fixed the translation error for "Wednesday" in the reboot schedule.
9. Increased the length of the Remarks field (supports 30 characters and displays correctly on the SAAD side).
10. Added ring timeout parameter configuration; default is 0 (never timeout).

11. X10: Fixed the issue where the button could not initiate a call when only the P2P function was enabled.
12. Added a log download feature.
