1. Preface

1.1 Audience

This manual is intended to provide clear operating instructions for those who will configure and manage the IPS-M1-D1W Network Multi-Info Speaker. By carefully reading and consulting this guide, users could solve the setting and deployment issues of the IPS-M1-D1W Network Multi-Info Speaker.

1.2 Revision History

Document Version	Applicable Firmware Version	Update Content	Update Date
1.0.0	1.0.0	Updated operating instructions for software version v1.0.0.	2026.4

2. Overview

2.1 Product Overview

The ZYCOO IPS-M1-D1W Network Multi-Info Speaker is an IP-based communication endpoint that integrates audio broadcasting, visual display, and strobe light alerting into a single device. Built on SIP and multicast technologies, it is designed for environments that require clear voice communication and high-visibility visual alerts.

2.2 Product Specifications

IPS-M1-D1W Network Multi-Info Speaker Specifications		
Speaker	4.5" Full Range Driver Units	
Sensitivity	91dB / 1W / 1m	
Max Sound Pressure Level	101dB	
Frequency Range	70Hz~20KHz	
Display Type	High Resolution Back-Lit Color LCD Displays	
Strobe Light Color	Red, Green, Blue	
Amplifier	Built-in Class D Amplifier	

3. Login the Device

3.1 Accessing the Web GUI

IPS-M1-D1W obtains the IP address through DHCP by default, please ensure that there is an available DHCP server in your LAN (If DHCP fails to obtain an address, it will use a wired static IP address: **192.168.32.101**). You can also visit the ZYCOO website to download the SAAD tool or the AudioConfig app to find ZYCOO devices under the LAN and get the IP addresses.

Default username: admin

Default password: admin

For the safety purpose, it is recommended to change the default password on the first login, please go to **System --> Password Settings** page to change the password.

The image shows the login interface of the Network Multi-Info Speaker web GUI. It features a title "Network Multi-Info Speaker" at the top. Below the title are three input fields: "Username" with a user icon, "Password" with a lock icon, and a language dropdown menu currently set to "English". At the bottom is a prominent blue "LOGIN" button.

Login Interface

After entering the correct username and password, you can log in to the device's web management interface.

3.2 Device Info

After successful login, you will see the information interface of the device, and you can view the basic information of the device.

SIP STATUS			
Primary SIP Account	5013@192.168.11.62:5060	Registered	Idle
Secondary SIP Account-1	1013@192.168.11.83:5060	Registered	Idle
Secondary SIP Account-2		Unconfigured	

SIP Status

- **SIP Account:** Displays the SIP number configured on this device.
- **SIP Server:** Displays the SIP server (Such as ZYCOO IP Audio Center or IP PBX) address.
- **Register Status:** Displays the SIP number registration status.

SERVICE STATUS INFORMATION	
Primary SIP Service	Enabled
Secondary SIP Service-1	Enabled
Secondary SIP Service-2	Disabled
SIP P2P Service	Enabled
Multicast	Enabled
ONVIF	Disabled
IP Audio Center	Enabled

Service Status

- **Primary SIP Service:** Displays the status of the primary SIP service.
- **Secondary SIP Service-1:** Displays the status of the secondary SIP service.
- **Secondary SIP Service-2:** Displays the status of the secondary SIP service.
- **SIP P2P Service:** Displays the status of peer-to-peer SIP communication.
- **Multicast:** Displays the multicast service status.
- **ONVIF:** Displays the ONVIF service status.
- **IP Audio Center:** Displays the connection status with ZYCOO IP Audio Center.

DEVICE INFORMATION	
Device Model	IPS-M1-D1W
Hardware Version	Ver1.1
Software Version	s1.0.0.007
Uptime	0:04
Speaker Volume	24 (+2dB) ↗
Mic Volume	8 (0-15) ↗
Device Description	IPS-M1-D1W ↗
Power Detection	PoE 802.3at (Max 25.5W)
Power Limits	Max Audio Volume Level30 (+8dB)

Device Information

- **Device Model:** Displays the model of the device.
- **Hardware Version:** Displays the hardware version number of the device.
- **Software Version:** Display the system version number of the device.
- **Uptime:** Displays how long the device has been running.
- **Speaker Volume:** Displays the current volume of the device.
- **Mic Volume:** Displays the current device microphone input volume.
- **Device Description:** Remarks the device information. The description will be displayed in a browser tab. After the Device Description is set, the description will be displayed in the browser tab, which is convenient for distinguishing different terminals when there are many terminal configuration pages.
- **Power Detection:** Displays the current power source (PoE 802.3at or DC input).
- **Power Limits:** Displays the maximum available audio output level under the current power condition (e.g., Max Audio Volume Level 30 (+8 dB)).

NETWORK INFORMATION	
Wireless Network Status	Connected (Zycoo-Hall) Signal Strength: -46dBm
Wired Network Status	Connected
Mac Address	
Connection Mode	DHCP
LAN IP Address	192.168.13.244
LAN Subnet Mask	255.255.255.0
Wi-Fi IP Address	192.168.12.221
Wi-Fi Subnet Mask	255.255.255.0
Gateway	192.168.12.1 192.168.13.1
Primary DNS	223.6.6.6
Alternative DNS	223.5.5.5

Network Information

- **Wireless Network Status:** Displays the wireless connection status and related information.
- **Wired Network Status:** Displays the wired connection status and related information.
- **Mac Address:** Displays the MAC address of the current device.
- **Connection Mode:** Displays the network acquisition method of the device, DHCP (dynamic acquisition) or STATIC (static configuration).
- **LAN IP Address:** Displays the current IP address of the device.
- **LAN Subnet Mask:** Displays the current subnet mask of the device.
- **Wi-Fi IP Address:** Displays the IP address of the wireless network interface.
- **Wi-Fi Subnet Mask:** Displays the subnet mask of the wireless network.
- **Gateway:** Displays the gateway address currently used by the device.
- **Primary DNS:** Displays the primary domain name server address used by the device.
- **Alternative DNS:** Displays the secondary domain name server address used by the device.

4. SIP Settings

4.1 SIP Account Settings

There are three (3) SIP accounts under the SIP Settings, one (1) primary and two (2) secondary for the use of different SIP accounts to proceed with various tasks. If the current device needs to cooperate with the ZYCOO IP Audio Center, please turn on the 'Enable Integration with IP Audio Center' option.

Please go to **SIP Settings --> Primary SIP Account / Secondary SIP Account-1 / Secondary SIP Account-2** page.

Basic Configuration

Line Status: Registered

* SIP Server:

192.168.13.109

* SIP Port:

—

5060

+

* User ID:

5003

Password:

.....

Auto Answer:

Yes

Enable Integration with IP

Audio Center:

Activate:

SIP Account - Basic Configuration

- **Line Status:** Display the current registration status of the SIP account.
- **SIP Server:** Enter the IP address or domain name of the SIP server.

- **SIP Port:** The default SIP port is 5060. If your SIP server uses a different port, update this setting accordingly.
- **User ID:** Enter the SIP account number provided by your SIP server.
- **Password:** Enter the password for authorizing the SIP account.
- **Auto Answer:** Options include Yes, No, or Answer Delay. The default setting is 'Yes.'
- **Enable Integration with IP Audio Center:** Disabled by default. Enable this option when connecting to the ZYCOO IP Audio Center. This option is available only for the primary SIP account.
- **Activate:** Once enabled, the account will be activated and registered with the SIP server.

Advanced Configuration

Auth User:

Domain:

* Register Expiration(Sec):

* Transport:

NAT Mode:

Keepalive: ☒

* Keepalive Interval(Sec):

SIP Account - Advanced Configuration

- **Auth User:** Enter the authorized username for the SIP account.

- **Domain:** Enter the SIP Domain.
- **Register Expiration (sec):** Set the SIP registration expiration time, with a default of 180 seconds.
- **Transport:** Choose the transport protocol: UDP, TCP, or TLS.
- **NAT Mode:** Select the NAT mode and provide the necessary details.
Supports STUN, TURN, and ICE modes.
- **Keepalive:** Enable the SIP keepalive function to maintain an active connection.
- **Keepalive Interval (Sec):** Set the interval for SIP keepalive messages.

4.2 P2P Account Settings

P2P stands for Peer to Peer. In a P2P network, the peers are connected to each other via the Internet, files can share, or peers can call each other directly between systems on the network without the need for a central server.

Please go to **SIP Settings --> P2P Account Settings** page to configure the P2P settings first.

After configuring the P2P account, it can be used with the Outgoing Call feature in

Advanced Settings --> I/O Settings, or use the Outgoing API in **Advanced Settings --->**

API Settings to make a P2P call.

The screenshot shows a web form titled "P2P Account". It contains the following fields and controls:

- User Authentication:** A toggle switch that is currently turned on (green).
- User ID:** A text input field containing the value "101".
- Auto Answer:** A dropdown menu with "Yes" selected.
- Activate:** A toggle switch that is currently turned on (green).
- Submit:** A blue button at the bottom of the form.

P2P Account

- **User Authentication:** Enable/Disable P2P authentication. If disabled, you can directly enter this device's IP address in the target field of the peer device. If enabled, you must use the following format in the target field of the peer device: This device's P2P User ID + IP address (e.g., 101@192.168.1.101).
- **User ID:** The User ID will be displayed as the outgoing number when calling out, or the number that peer device needs to dial. You must use the following format in the target field of the peer device: This device's P2P User ID + IP address (e.g., 101@192.168.1.101).
- **Auto Answer:** Options include Yes, No, or Answer Delay. The default setting is 'Yes.'
- **Activate:** Enable/Disable the P2P feature.

4.3 Advance SIP Settings

To configure some advanced parameters of the SIP protocol, please go to **SIP Settings --> Advance SIP Settings** page.

4.3.1 SIP Parameter Settings

SIP Parameter Settings

Local Port:

* RTP Start Port:

* RTP End Port:

* RTP Timeout(Sec):

Jitter Buffer:

Acoustic Echo Cancellation: ☒

Adaptive Noise Reduction: ☒

Automatic Generation Control: ☐

Comfort Noise Generator: ☐

SIP Parameter Settings

- **Local Port:** This setting represents the port used to receive SIP packets.
- **RTP Start Port:** This setting represents the starting RTP port that will use for media sessions.
- **RTP End Port:** This setting represents the end RTP port that the system will use for media sessions.
- **RTP Timeout (sec):** This setting means that within a specific time range, if the system does not receive the RTP stream, the call will end.
- **Jitt Buffer:** This setting represents the Jitter buffer where voice packets can be collected, stored, and sent to the voice processor in even intervals. Three options are provided, off/adaptive/fixed. A fixed jitter buffer adds a fixed delay to voice packets. An adaptive jitter buffer can adjust based on the delays in the network.

- **Acoustic Echo Cancellation:** After enabling this feature, echo noise can be suppressed through algorithms.
- **Adaptive Noise Reduction:** After enabling this feature, algorithms can suppress environmental noise collected by microphones.
- **Automatic Generation Control:** After enabling this feature, the voice signal can be automatically enhanced according to the distance and size of the voice source. After optimization through the AGC, the effective pickup distance of our equipment can reach a maximum of more than 10 meters.
- **Comfort Noise Generator:** After enabling this feature, comfortable white noise can be added during calls.

4.3.2 SIP Function Settings

The screenshot shows a web interface titled "SIP Function Settings". It contains several configuration options: "Answer Local Beep" with a disabled toggle switch; "Answer Remote Beep" with an enabled toggle switch; "Beep Sound File" with a dropdown menu showing "Start Beep" and a "Play" button; "Beep Volume" with a slider set to 90; "Hangup Beep" with a disabled toggle switch; and "Second Call Handling" with a dropdown menu showing "Hangup" and an information icon. A "Submit" button is at the bottom.

SIP Function Settings

- **Answer Local Beep:** If this setting is enabled, the selected beep sound will be played first on the local device side after the SIP session is answered.
- **Beep Sound File:** Select a specific beep sound file. Click the Play button, you could listen to this audio file.
- **Beep Volume:** Set the volume of the beep.

- **Answer Remote Beep:** If this setting is enabled, the selected beep sound will be played first on the remote device side after the SIP session is answered.
- **Hangup Beep:** If this setting is enabled, the selected beep sound will be played on the local device side before the SIP session is completely hung up.
- **Second Call Hanging:** Set the volume of the beep. Options for handling the second call: Hangup: Directly hang up the second call. Hold: Hold the first call and automatically resume it after ending the second call. Merge: Join the second call into the first call, allowing all parties to speak simultaneously.

4.3.3 Audio Codecs

IPS-M1-D1W supports 4 audio codecs: G.722 (wideband codec), G.711(Ulaw), G.711(Alaw), and Opus.

Audio Codecs

G.722: ☒

G.711(Ulaw): ☒

G.711(Alaw): ☒

Opus: ☐

Submit

Audio Codecs

Please keep at least one codec enabled and supported by the SIP server, otherwise, SIP paging will not work.

5. Function Settings

5.1 ONVIF Settings

ONVIF provides and promotes standardize interfaces for effective interoperability of IP-based physical security products. If the user has installed a VMS that supports ONVIF, they can register ZYCOO network devices that support ONVIF on it for operation.

Please go to **Functions** ---> **ONVIF Settings** to configure the ONVIF settings.

The screenshot displays the 'ONVIF Settings' and 'Relay Control' configuration page. The 'ONVIF Settings' section includes a toggle for 'Enable' (currently turned on), a 'Username' field with 'admin', a 'Password' field with masked characters, a 'VMS Platform' dropdown menu set to 'Normal', and an 'Enable Microphone' toggle (currently turned off). The 'Relay Control' section features a 'Relay Mode' dropdown set to 'Monostable', a 'Duration(Sec)' spinner set to 3, and a 'Relay Type' dropdown set to 'Disabled'. A blue 'Submit' button is located at the bottom of the form.

ONVIF & Relay Control Settings

- **Enable:** Enable/Disable ONVIF integration for compatibility with ONVIF-supported VMS platforms.
- **Username:** Enter an account username with matching credentials for adding devices to the VMS platform.
- **Password:** Enter a matching password for the account to add devices to the VMS platform.

- **VMS Platform:** Allows user to select a specific VMS platform from the drop-down list to enable compatibility with different VMS systems.
- **Enable Microphone:** Enable/Disable the microphone function.
- **Relay Mode:** Set relay control to monostable or bistable. In monostable mode, you can specify the activation duration.
- **Duration(Sec):** Set the activation duration in monostable mode.
- **Relay Type:** Select the relay behavior: Disabled, Single Toggle (e.g. Door Strike, Audible Visual Alarm), Fast Toggle (e.g. Strobe Fast Flashing), Slow Toggle (e.g. Strobe Slow Flashing).

5.2 Multicast

The Multicast feature allows the device to receive and play audio streams from multicast addresses. It also enables synchronized actions across multiple devices within the same network, such as triggering scene presets for coordinated visual and audio alerts.

The device supports monitoring up to 9 multicast channels with configurable priorities. Higher-priority streams will automatically interrupt lower-priority audio playback. Please go to **Functions ---> Multicast** page to enable the multicast feature.

Multicast

Enable Multicast: ☒

Network Caching(ms):

Port range from 2000-65535

Priority from highest 9 to lowest 1

An audio stream with higher priority will supersede the lower one

Priority	Multicast Address	Multicast Port	Name	Relay Control	Scene Linkage
1	239.168.4.3	− 2100 +	Background-Music	Fast Toggle (e.g. Strobe ▾	(4) Emergency 4: Fire ▾
2		− 2000 +		Disabled ▾	Disabled ▾
3		− 2000 +		Disabled ▾	Disabled ▾
4		− 2000 +		Disabled ▾	Disabled ▾
5		− 2000 +		Disabled ▾	Disabled ▾

Multicast

- Priority:** Priority from highest 9 to lowest 1.
- Multicast Address:** The multicast address range is 224.0.0.0 – 239.255.255.255.
- Multicast Port:** The multicast port range is 2000 – 65535.
- Name:** Customize the name of the multicast address.
- Relay Control:** Select the relay behavior: Disabled, Single Toggle (e.g. Door Strike, Audible Visual Alarm), Fast Toggle (e.g. Strobe Fast Flashing), Slow Toggle (e.g. Strobe Slow Flashing).
- Scene Linkage:** Select a scene preset to trigger display and alert actions.

6. Advanced Settings

6.1 Audio

6.1.1 Audio Files

The Audio Files page is used to manage audio files and playlists stored in the device's onboard storage. These audio files can be used across multiple system functions, such as scheduled events. Supported audio formats include WAV and MP3.

Click **Advanced** ---> **Audio** ---> **Audio Files** to enter the audio file management page.

Audio File Management

Click the "Click Upload" button to select the local audio file to be uploaded. Click the "Delete" button to delete the audio file.

Upload Audio File

Click **Advanced** ---> **Audio Management** and click Playlist to create, check and edit the playlists.

Playlist

In the playlist interface, click the "+" button to select the required audio files to add, and click "Edit" and "Delete" to edit and delete the created playlist.

Create a New Playlist

6.1.2 Ringtones File

Ringtones File allows users to self-upload up to 5M of audio files to the endpoint and use it as a ringtone or Play API audio file. Please click on the ‘Select audio file’ button to select and upload the local audio file, then click on the ‘upload’ button to upload it. Click on the ‘play’ to test and play the audio file and the ‘delete’ button to delete the audio file.

Please go to **Advanced ---> Audio ---> Ringtones File** to manage the audio files.

Ringtones File

6.1.3 Audio Priority

The audio priority can be set according to different applications(such as SIP, ONVIF, MULTICAST, BROADCAST...). Please go to **Advanced ---> Audio ---> Audio Priority** to set the priority.

Priority 1 is the highest. You can drag the arrow on the right side to adjust the priority. The execution of a high-priority audio application will interrupt the current low-priority audio application.

Audio Priority

Priority 1 is the highest and can be adjusted by dragging.

Priority	Application name	Operation
1	SIP	▼
2	ONVIF	▲ ▼
3	MULTICAST	▲ ▼
4	BROADCAST	▲ ▼
5	SCHEDULER-AUDIO	▲

Submit

Audio Priority Settings

6.1.4 Advanced Audio

To set the volume, please go to **Advanced --> Audio --> Advanced Audio** page to configure. You can set the master volume as well as the individual volume levels for each application (e.g. SIP, multicast, ONVIF...), and you can also configure Remote Volume Control settings on this page.

Advanced Audio Settings

Ambient Noise Compensation:

Static Compensation

?

Ambient Noise Compensation Value(dB):

Startup IP Announcement:

☒ ?

Advanced Audio Settings

- **Ambient Noise Compensation:** Enable or disable automatic volume adjustment based on ambient noise. Automatically adjusts playback volume based on ambient noise levels to improve the intelligibility of broadcast content. Two modes are supported: Static Compensation (calculates the compensation gain once before playback) and Dynamic Compensation (continuously adjusts the compensation gain during playback). *Note: This feature typically provides good performance for voice broadcast applications. For music playback, the compensation performance may vary depending on the content type. For music with a wide dynamic range or frequent rhythm changes (e.g., rock, electronic music), the compensation gain may fluctuate more noticeably, which can affect the perceived volume adjustment behavior. It is recommended to evaluate the feature in the actual application scenario and select the appropriate compensation mode accordingly.*
- **Ambient Noise Compensation Value(dB):** Set the compensation level applied when ambient noise is detected. A higher value results in greater volume adjustment.
- **Speaker Minimum Volume:** Set the minimum allowed speaker output level. The range is 0–30, representing a linear gain scale, where 0 = mute, 22 $\approx$ 0 dB (unity gain), and 30 $\approx$ +8 dB.
- **Speaker Maximum Volume:** Set the maximum allowed speaker output level. The range is 0–30, representing a linear gain scale, where 0 = mute, 22 $\approx$ 0 dB (unity gain), and 30 $\approx$ +8 dB.
- **Speaker Output Volume:** Set the default speaker output volume when Ambient Noise Compensation is disabled. The range is 0–30, representing a linear gain scale, where 0 = mute, 22 $\approx$ 0 dB (unity gain), and 30 $\approx$ +8 dB.
- **Intercom Microphone Input Volume:** Set the microphone input volume level. The adjustable range is 0–15.
- **Key Tone:** Enable/Disable the beep sound from the key button.
- **Music Auto-Resume:** When enabled, the device will automatically resume previous music playback tasks after a restart or network reconnection.
- **Startup IP Announcement:** When enabled, the device will announce its IP address once upon startup.

App Volume

* SIP Volume: 80

ONVIF Volume: 80

Submit

App Volume Settings

- **SIP Volume:** Set the specific volume for SIP application.
- **ONVIF Volume:** Set the specific volume for ONVIF application.
- **Broadcast Volume:** Set the specific volume for broadcast application.
- **Multicast Volume 1:** Set the specific volume for multicast 1 application.
- **Multicast Volume 2:** Set the specific volume for multicast 2 application.
- **Multicast Volume 3:** Set the specific volume for multicast 3 application.
- **Multicast Volume 4:** Set the specific volume for multicast 4 application.
- **Multicast Volume 5:** Set the specific volume for multicast 5 application.
- **Multicast Volume 6:** Set the specific volume for multicast 6 application.
- **Multicast Volume 7:** Set the specific volume for multicast 7 application.
- **Multicast Volume 8:** Set the specific volume for multicast 8 application.

- **Multicast Volume 9:** Set the specific volume for multicast 9 application.

This page is used to configure remote volume control using the VC-Z01 volume controller. By matching multicast channel settings between the VC-Z01 and the endpoint speaker device, remote volume adjustments can be performed over the network.

Please go to **Advanced** → **Audio** --> **Advanced Audio** → **Remote Control** page to configure.

Channel Settings

The volume control function must be used with the volume controller device VC-Z01.
10 default channels and 5 customizable channels are available. To use a custom channel, please manually select and configure the parameters. Supported multicast port range: 20-65535.

Enable: ☒

Volume Control Channel: Channel 10 Channel Status: Not Connected

Custom Channel

Channel	Multicast Address	Multicast Port
Custom Channel 11		— 20 +
Custom Channel 12		— 20 +
Custom Channel 13		— 20 +
Custom Channel 14		— 20 +
Custom Channel 15		— 20 +

Remote Control Settings

- **Enable:** To enable remote volume control, VC-Z01 must be configured together with the endpoint devices. This requires settings to be completed on both the VC-Z01 web GUI and the endpoint web GUI. Once the channels match between VC-Z01 and the endpoints within the same local network segment, the endpoint device will display a Connected status.

- **Volume Control Channel:** Provides 10 default channels (Channel 1 – 10), and 5 customizable channels (Channel 11 – 15).
- **Channel Status:** Displays the connection status between the VC-Z01 and the endpoint device. Connected: The devices are successfully paired and remote control is available. Not Connected: The devices are not matched.
- **Custom Channel:** For Channel 11 – 15, you can define a custom multicast address and port. Multicast Address Range: 224.0.0.0 – 239.255.255.255 Supported Port Range: 20 – 65535.

For example, if both the VC-Z01 and the endpoint device are set to Channel 1, and are within the same network segment, clicking Submit on both GUIs will initiate connection. Once connected, the VC-Z01 can remotely adjust the volume of any endpoint device configured on the same channel.

6.2 Display

6.2.1 Scene Presets

Users can create multiple scene presets and configure corresponding display content. When a preset is triggered, the system will display the configured text on the screen and optionally activate the strobe lights for visual notification. Based on different scenario requirements, different presets can be used for routine notifications or emergency alerts. Please go to **Advanced --> Display --> Scene Presets** to manage the presets.

The system provides several default presets for both emergency and routine scenarios. Users can also customize presets as needed. Scene Presets can be triggered by buttons, incoming calls, DTMF, multicast, event scheduler, or through the background music/alarm function of the ZYCOO IP Audio Dispatch Console.

Users can also create up to three different strobe profiles based on usage preferences. These profiles can then be assigned and used in Scene Presets to provide visual alerts in different scenarios. The system also provides default strobe settings for common use cases. For

example, Emergency uses fast red flashing, Routine uses slow blue flashing, and Clear uses steady green light. Strobe light settings can be configured under the Strobe Profiles sub-page of this section.

Scene Presets

Strobe Profiles

Scene Presets

Create

Id	Name	Display Text	Background Color	Priority	Strobe Flash ●	Preview	Operation
1	Emergency 1: Intruder/Violence	Intruder Alert		High	Strobe Profile 1	Start	Edit Delete
2	Emergency 2: Shooting/Lockdown	Emergency Lockdown		High	Strobe Profile 2	Start	Edit Delete

Scene Presets Settings

- **Create:** Create a new scene preset.
- **ID:** The unique identifier of the preset.
- **Name:** The name of the preset.
- **Display Text:** The content that will be displayed on the screen when the preset is triggered.
- **Background Color:** The background color of the screen when the preset is triggered.
- **Priority:** The priority level of the preset. Five priority levels are supported. A higher-priority preset will override any lower-priority content currently being displayed. For presets with the same priority, the most recently triggered preset will take effect. In the default presets, Emergency is set as high priority, Routine is set as low priority, and Clear is set as the highest priority.

- **Strobe Flash:** Select the strobe profile to be used when this preset is triggered. Available options include Profile 1, Profile 2, Profile 3, or disabled. When a profile is selected, the corresponding strobe behavior defined in the Strobe Profiles section will be applied.
- **Preview:** Preview only simulates display and strobe behavior locally, including display content and strobe effect. Click Start to run the preview. Click Stop to end the preview.
- **Operation:** Edit or delete the preset.

The image shows a 'Create' dialog box with a close button (X) in the top right corner. It contains the following fields and controls:

- Name:** A text input field with a red asterisk indicating it is required.
- Display Text:** A text input field containing the placeholder text 'Maximum number of display characters:64.' with a red asterisk indicating it is required.
- Background Color:** A color selection button showing a blue square with a downward arrow.
- Priority:** A dropdown menu currently set to 'Lowest'.
- Strobe Flash:** A dropdown menu currently set to 'Disabled'.

At the bottom right of the dialog are two buttons: 'Cancel' and 'Submit'.

Create Presets

The screenshot shows an 'Edit' dialog box with the following fields and values:

- Name:** Emergency 1: Intruder/Violence
- Display Text:** Intruder Alert
- Background Color:** Black
- Priority:** High
- Strobe Flash:** Strobe Profile 2

Buttons at the bottom: Cancel, Submit

Edit Presets

- **Name:** Set the name of the preset.
- **Display Text:** Set the content that will display on the screen when the preset is triggered.
- **Background Color:** Set the background color of the screen when the preset is triggered.
- **Priority:** Set the priority level of the preset. Five priority levels are supported. A higher-priority preset will override any lower-priority content currently being displayed. For presets with the same priority, the most recently triggered preset will take effect.
- **Strobe Flash:** Select the strobe profile to be used when this preset is triggered. Available options include Profile 1, Profile 2, Profile 3, or disabled. When a profile is selected, the corresponding strobe behavior defined in the Strobe Profiles section will be applied.

ID	Flash Pattern	Brightness	Color
1	Steady On	High	Green
2	Fast Flashing	High	Red
3	Slow Flashing	Medium	Blue

Submit

Strobe Profiles

- **ID:** The unique identifier of the strobe profile.
- **Flash Pattern:** Defines the flashing behavior of the strobe light. The following options are supported: Steady On: Constant light without flashing. Fast Flashing: High-frequency flashing. Slow Flashing: Low-frequency flashing.
- **Brightness:** Sets the light intensity level. The following levels are available: High, Medium, Low.
- **Color:** Defines the strobe light color. RGB color options are supported.

6.2.2 Incoming Call Settings

Users can configure the screen to display caller information when there is an incoming call. They can also set up a strict number-matching list to trigger preset displays. Please go to **Advanced** ---> **Display** ---> **Incoming Call Settings** to configure.

General Display Settings

Display Mode: Caller Name

Priority: Medium

Background Color:

General Display Settings

- **Display Mode:** Set the screen display mode triggered by incoming calls. Options include displaying the caller name, the caller number, or both.
- **Priority:** This priority is used to control the execution order of the display content and follows the same priority rules as 'Scenario Presets'. For example, a SIP incoming call display with Medium priority will override the current preset display with Low priority.
- **Background Color:** Set the background color of the screen.

Number Matching Settings

Create

Matched Number	Scene Linkage
2002	(2) Emergency 2: Shooting/Lockdown Priority: High

Delete

Total 1 < 1 >

Submit

Number Matching Display Settings

- **Matched Number:** Configure the incoming call number to trigger specific display content through precise matching.
- **Trigger Preset Display:** Select the preset to be displayed when precise matching is activated.

6.2.3 Countdown Timer

This page allows users to configure countdown timers for scheduled events, such as exams, announcements, or time-based reminders. The countdown will be displayed on the screen and can optionally trigger audio playback when it ends.

Please go to **Advanced ---> Display ---> Countdown Timer** to configure.

Countdown Timer Settings

Enable: ☒

Countdown Timer Settings

- **Enable:** Enable or disable the countdown timer function.
- **Apply:** Apply the selected countdown timer profile.
- **Countdown Profiles:** Displays the list of configured countdown timer profiles.
- **ID:** The unique identifier of the profile.
- **Name:** The name of the countdown timer profile.
- **Description:** A brief description of the profile.
- **Start Time:** The time when the countdown begins.
- **Countdown Duration:** The total duration of the countdown.
- **Operation:** Edit or delete the selected profile.

- **Name:** Set the name of the countdown timer profile.
- **Description:** Set a description for the profile.
- **Start Time:** Defines the scheduled start time of the countdown (based on system time).
- **Duration Type:** Select the display format of the countdown. The following formats are supported: Day / Hour / Minute, Hour / Minute / Second.
- **Countdown Duration:** Set the total countdown time.
- **Play Audio After Countdown:** Enable or disable audio playback when the countdown ends.

- **Audio Source:** Select the audio source for playback. The following options are available: Ringtone, Audio File, Playlist.
- **Playback Count:** Set how many times the audio will be played. Set to 0 for continuous loop playback.
- **Volume:** Set the playback volume level.
- **Slide Mode:** When enabled, the countdown display and the regular time display page will automatically switch at intervals.
- **Slide Duration (Sec):** Set the interval (in seconds) for switching between the countdown page and the regular display page.

6.2.4 Advanced Display

This page allows users to configure advanced display-related parameters.

Please go to **Advanced** ---> **Display** ---> **Advanced Display** to configure.

Advanced Display

Screen Settings

Screen Brightness:

Submit

Screen Settings

- **Screen Brightness:** Adjust the brightness level of the display. Levels from 1 to 10 are available, where a higher value indicates higher brightness.

6.3 Wireless Button Settings

This page allows users to pair the device with BLE-based wearable smart buttons and configure trigger actions. Once paired, the wearable button can trigger predefined local actions on the device, such as initiating an outgoing call, activating scene linkage, or controlling relay outputs (e.g., door locks). In emergency situations, users can press the button within Bluetooth range to remotely trigger alerts and predefined responses.

When multiple IPS-M1-D1W devices are paired with the same wearable button, all devices within Bluetooth coverage range that successfully receive the BLE trigger signal will respond simultaneously and execute the configured actions.

To avoid unintended repeated triggering, the wearable button may apply an internal debounce and anti-retrigger mechanism. Each single press is treated as a single valid event, and repeated triggers within a short time window will be ignored. Please go to **Advanced ---> Wireless Button** to configure.

The screenshot displays the 'Wireless Button Settings' web interface. At the top, there is a header bar with the title 'Wireless Button Settings'. Below this, the main content area has a sub-header 'Wireless Button Settings'. The interface includes an 'Enabled' toggle switch, which is currently turned on (green). Below the toggle, there is a 'Bind Devices' section with a text input field containing the placeholder 'Please enter the Bluetooth button MAC' and a blue 'Bind' button. Underneath, a 'Paired List' section shows two entries, each with a blurred MAC address, a green 'Bound' label, and a red 'Unbound' button. At the bottom of the interface is a blue 'Submit' button.

Bluetooth Settings

- **Enabled:** Enable or disable the Bluetooth function.
- **Bind Devices:** Enter the MAC address of the wearable smart button to bind with the device.
- **Paired List:** Displays the list of currently paired devices. Users can view or unbound paired devices.

The screenshot shows the 'Trigger Event' configuration page. It contains the following elements:

- Action:** A dropdown menu set to 'Outgoing Call'.
- Destination Number:** A text input field containing '1001'.
- Line:** A dropdown menu set to 'Master SIP Account'.
- Press Again to End Call:** A green toggle switch that is turned on.
- Scene Linkage:** A green toggle switch that is turned on.
- Scene Linkage:** A dropdown menu showing '(2) Emergency 2: Shooting/Lockdown'.
- Duration (seconds):** A numeric input field with a value of '5', flanked by minus and plus buttons.
- Relay Control:** A grey toggle switch that is turned off.
- Submit:** A blue button at the bottom center.

Trigger Event Settings

- **Action:** Select the action to be triggered when the button is pressed. Available options include: Outgoing Call, HTTP Request, Play Audio
- **Outgoing Call:** Configure the destination number or SIP account for the outgoing call.
- **HTTP Request:** Configure the target URL and parameters for the HTTP request.
- **Play Audio:** Select the audio source (ringtone, audio file, or playlist) for playback.
- **Scene Linkage:** Enable and select a predefined scene preset to trigger visual and strobe actions.
- **Relay Control:** Trigger relay output to control external devices, such as door locks or alarm systems.

6.4 Event Scheduler

The event scheduler can edit up to 30 time plans, you can click the corresponding option to edit or delete them. Before you edit/create an event scheduler. The schedules in the holiday setting will not be executed.

Please go to **Advanced** ---> **Event Scheduler** to manage the events.

Holidays Setting

Time Settings

- **Activate:** Activate/Deactivate the schedule.
- **Name:** Set the name of the schedule.
- **Description:** Comment information for the time schedule.
- **Date Selection:** Set the date range for the time schedule.
- **Weekday:** Set the execution week day in the date range.
- **Holiday Exceptions:** Enable the holiday feature or not.
- **Time Selection:** Set the specific time period for executing the action.
- **Interval(min):** Set the interval time for performing actions.
- **Audio File:** Select an audio file to play.
- **Play Times:** Set the number of playbacks. When set to "0", it is loop playback.
- **Volume:** Set the playback volume for the scheduler.

- **Event Scheduler Priority:** Assign priority to the scheduler system; higher-priority schedules will always execute first.
- **Scene Linkage:** Enable and select a predefined scene preset to trigger visual and strobe actions.

6.5 API Settings

This page is used to configure the API interface of the device. Through the API interface, you can realize device linkage, call control, relay control, and play sound by using the changing status of the call and/or relay.

Please go to **Advanced --> API Settings** page to enable API settings.

API Authentication Settings

- **API Authentication Enabled:** Once enabled, all API requests to this device will require authentication.

The screenshot shows a settings interface with two main sections. The first section, 'Call Event URL Callback', contains five toggle switches, all of which are currently turned off. The second section, 'Relay Event URL Callback', contains two toggle switches, also both turned off. Each section has a question mark icon next to its title.

Call Event URL Callback

- Incoming Enable: ☐
- Outgoing Enable: ☐
- Answered Enable: ☐
- Hangup Enable: ☐
- Register Failed Enable: ☐

Relay Event URL Callback

- On Enable: ☐
- Off Enable: ☐

Call Event URL Callback & Relay Event URL Callback

When the call status changes, it will trigger an HTTP GET request to call a URL address.

Within the URL address, you may use variables to identify some current information.

For example:

<code>\${ip}</code> :	The current IP address of the device
<code>\${mac}</code> :	The current MAC address of the device
<code>\${ua}</code> :	The account of the current call
<code>\${number}</code> :	The number of the current call

When the relay status changes, it will trigger an HTTP GET request to call a URL address.

Within the URL address, you may use variables to identify some current information.

For example:

<code>\${ip}</code> :	The current IP address of the device
<code>\${mac}</code> :	The current MAC address of the device

Relay Settings

- **Relay Mode:** Select the relay behavior: Disabled, Single Toggle (e.g. Door Strike, Audible Visual Alarm), Fast Toggle (e.g. Strobe Fast Flashing), Slow Toggle (e.g. Strobe Slow Flashing).
- **Triggered by DTMF Signal:** Enable or disable relay triggering via DTMF (RFC2833 supported).
- **DTMF Code:** Specify the DTMF code used to trigger the relay.
- **Trigger by Call Status:** Enable or disable relay triggering based on call status changes.
- **Call Status:** Select the call state that triggers the relay, including: Outgoing, Incoming, Incoming/Outgoing, Answered, and Hangup.
- **Reset Mode:** Select how the relay returns to its original state.
- **Duration (sec):** Available when Delay Reset is selected. Defines how long the relay remains active before resetting.
- **Triggered via Dispatch Console Music:** Select the relay behavior when the Dispatch Console broadcast music is active.
- **Triggered via Dispatch Console Alarm:** Select the relay behavior when the Dispatch Console broadcast alarm is active.

6.7 PTP Settings

PTP (Precision Time Protocol) is a network time protocol used to provide high-precision time synchronization. Please go to **Advanced ---> PTP Settings** page to set. After enabling PTP settings, you can manually set the PTP server to improve the synchronization of the music playback clock.

The screenshot shows a web interface titled "PTP Settings". It contains a toggle switch labeled "Enable:" which is currently turned on (green). Below this is a text input field labeled "* PTP Server:". At the bottom of the form is a blue "Submit" button.

PTP Settings

- **Enable:** Enable or disable PTP time synchronization. When enabled, the device will use the configured PTP server for high-precision time alignment instead of relying only on NTP.
- **PTP Server:** Specify the IP address or domain name of the PTP master clock server used for synchronization.

7. System Settings

7.1 Network

The IPS-M1-D1W supports both wired and wireless network connections and uses DHCP to obtain an IP address automatically by default. When both wired and wireless are available, the system will follow Network Route configuration for traffic selection.

To configure a static IP address, please go to **System--> Network**, disable the DHCP option, and manually enter the required network parameters.

General Network Setting

- **Network Status:** Displays the current network connection status, including: Wireless network connection status and signal strength, Wired network connection status
- **Network Route:** Defines the preferred network interface for data transmission. Users can specify whether traffic is routed through the wired network or wireless network when both are available.

Wired Network Settings

Access Type: HTTP

Network Mode: Static IP

* IP Address: 192.168.32.101

* Subnet Mask: 255.255.255.0

* Gateway: 192.168.32.1

* Primary DNS: 114.114.114.114

* Alternative DNS: 8.8.8.8

Wired Network Setting

- **Access Type:** Specify the access method of the website, which currently supports HTTP and HTTPS.
- **IP Address:** Enter a vacant IP address within your LAN.
- **Subnet Mask:** Enter the subnet mask of your LAN.
- **Gateway:** Enter the default gateway of your LAN, this is essential for the device when the IP Audio Center or other SIP server is installed outside the LAN.
- **Primary DNS:** Enter an effective primary DNS server address.
- **Alternative DNS:** Enter an alternative DNS server address, when the primary DNS fails, alternative DNS will be used.

Wireless Network Setting

- **Wi-Fi Enabled:** Enable or disable the wireless network function.
- **Wi-Fi Mode:** Select the configuration mode for Wi-Fi connection. The following options are available: Auto Scan: Automatically scan and connect to available Wi-Fi networks. Manual Configuration: Manually configure Wi-Fi network parameters
- **Scan:** Click to scan and display available Wi-Fi networks.
- **Primary Wi-Fi Name (SSID):** Enter the SSID of the primary Wi-Fi network.
- **Primary Wi-Fi Password:** Enter the password of the primary Wi-Fi network.
- **Secondary Wi-Fi Name (SSID):** Enter the SSID of the backup Wi-Fi network.
- **Secondary Wi-Fi Password:** Enter the password of the backup Wi-Fi network.
- **Wi-Fi Mode:** Select how the device obtains an IP address: Dynamically Obtained (DHCP): Automatically obtain IP address from the network. Static IP: Manually configure IP address.

7.2 Time

The device synchronizes its system time with network time servers using NTP. The synchronized time is also displayed on the screen in idle mode.

To change the NTP settings, please go to **System --> Time** page.

Time

Current Time: 2023-11-17 16:39:12

NTP: ☒

* NTP Server:

Time Zone:

24 Hour Clock: ☒

Time Settings

- **Current Time:** Display the current system time of the device.
- **NTP:** Enable/Disable using NTP to obtain the time.
- **NTP Server:** The network time server used to obtain the time.
- **Time Zone:** Set the time zone used by the device.
- **24 Hour Clock:** Using 24-hour format for time display.

7.3 PoE Settings

This page allows users to configure PoE power negotiation settings. When the connected PoE injector or switch supports negotiation but does not provide PoE+ (IEEE 802.3at) power by default, this option can be enabled to request PoE+ power from the power source.

To enable the settings, please go to **System --> PoE Settings** page.

The image shows a web interface for PoE Settings. It has a title bar 'PoE Settings' and a subtitle 'PoE Settings'. Below the subtitle, there is a label 'PoE+ Power Negotiation:' followed by a toggle switch that is currently turned off. To the right of the toggle switch is a small circular icon with a question mark. Below the toggle switch is a blue 'Submit' button.

PoE Settings

- **PoE+ Power Negotiation:** Enable/Disable PoE+ (IEEE 802.3at) power negotiation. When enabled, the device will request higher power from the connected PoE power source if supported.

7.4 Prompt Language

The language of local voice prompts, like IP address announcements.

Please go to **System --> Prompt Language** page to set a voice prompt language.

The image shows a web interface for Prompt Language. It has a title bar 'Prompt Language' and a subtitle 'Prompt Language'. Below the subtitle, there is a label 'Voice Prompts Language:' followed by a dropdown menu showing 'English'. Below the dropdown menu is a blue 'Submit' button.

Prompt Language

7.5 Account

For resetting the current device's password, please go to **System --> Account** page.

The screenshot shows a web interface titled "Account". It contains three input fields: "Username" with the value "admin", "Old Password" (marked with a red asterisk), and "New Password" (marked with a red asterisk). Below these fields is a blue "Submit" button.

Web Password Settings

- **Old Password:** This setting represents the current user password.
- **New Password:** This setting represents the new password user would like to set up.

7.6 Reboot & Reset

IPS-M1-D1W can be rebooted and reset from the web management interface.

If you need to reboot or reset the device, please go to **System --> Reboot & Reset** page.

The screenshot shows a web interface with two sections. The first section is titled "Reboot" and contains a warning: "Warning: Rebooting the device will interrupt all ongoing broadcasting, intercom and calls!". Below the warning is a red "Reboot" button. The second section is titled "Reset" and contains a warning: "Warning: Resetting the device will interrupt all ongoing broadcasting, intercom and calls, and it will empty all configurations!". Below the warning is a red "Reset" button.

Reboot & Reset Settings

Users can restart the device without power failure on this page. The restart process takes about 10 seconds. After the restart is complete, refresh the page to log in again.

Note: Restoring factory settings will erase all user settings, please operate with caution!

A screenshot of a web interface titled "Reboot Schedule". Below the title is a horizontal line. Underneath the line, the text "Enable:" is followed by a toggle switch that is currently in the "off" position. Below the toggle switch is a blue rectangular button with the word "Submit" in white text.

Reboot Schedule

Enable: ☐

Submit

Reboot Schedule

When the Reboot Schedule feature is Enabled, you can set up the automatic reboot daily, weekly, or monthly at a specified time.

8. Maintenance

8.1 Upgrade

To upgrade the device's firmware, please go to **Maintenance --> Upgrade** page.

The screenshot shows the 'Upgrade' page of the device's web interface. At the top, there's a header 'Upgrade'. Below it, a section titled 'Current Firmware Info' displays 'Current Firmware Version:' with a green progress bar and 'Last Update: 2026-03-27'. A sub-section titled 'Upgrade' contains a red warning message: 'Warning: It will take around 150 seconds to complete the upgrade process, during the upgrade process please DO NOT power-off the device!'. Below the warning is a 'Reset Factory Defaults:' toggle switch, which is currently turned off. At the bottom, there's a 'Firmware:' section with a dashed box containing a cloud upload icon and the text 'Drag files here, or Click Upload'.

Upgrade Settings

- **Current Firmware Version:** Displays the version currently used by the system.
- **Last Update:** Displays the last system update time.
- **Reset Factory Defaults:** Specify whether to restore factory settings when upgrading.
- **Firmware:** Click to select the firmware that needs to be used to upgrade the current device.

8.2 Import/Export

This page is used to import and export the current configuration of the device, and you may use this configuration file to backup and/or recover. Both YAML and JSON formats are supported. Please go to **Maintenance --> Import/Export** page to backup or recover.

Import/Export

8.3 Auto Provisioning

The system is supporting DHCP Option 066 and static TFTP/HTTP two auto provisioning methods.

When the system starts by default and the network mode is in DHCP, it will try to grab option 066 from the DHCP data as the TFTP server address. If the system couldn't get the option information, it will use the below Static Provisioning Server data to obtain the configuration file. When the system starts, and the network mode is in Static, it will use the below Static Provisioning Server data to directly obtain the configuration file.

The configuration file name's format rules:

- 1) all letters in the server MAC address need to be uppercase.
- 2) all colons ":" need to be removed. For example, 68692E290012.

Please go to **Maintenance --> Auto Provisioning** page to configure static server.

DHCP Provisioning Server

When the system start by default and the network mode is in DHCP, it will try to grab option 066 from the DHCP data as the TFTP server address. If the system couldn't get the option information, it will use the below Static Provisioning Server data to obtain the configuration file. When the system starts, and the network mode is in Static, it will use the below Static Provisioning Server data to directly obtain the configuration file.

The configuration file name's format rules:

- 1) all letters in the server MAC address need to be uppercase
- 2) all colons ":" need to be removed. For example, 68:69:2E:29:00:12

Static Provisioning Server

Access Mode: TFTP

TFTP Server Address: 10.10.1.5

Configuration Format: JSON

Configuration Filename: \$mac.json

Update Mode: Update after reboot

Ping

8.5 Ethernet Capture

The Ethernet Capture tool allows users to capture network packets from the device and save them as standard Wireshark-compatible .pcap files for analysis. Users can capture traffic from the following network interfaces: eth0 (Ethernet interface) and wlan0 (Wireless interface). Please go to **Maintenance --> Ethernet Capture** page to operate.

Ethernet Capture

8.6 Test

The Test feature allows users to verify whether key hardware components (such as speaker, microphones, strobe, and relay) are functioning properly before deployment.

Please go to **Maintenance** --> **Test** page to perform diagnostic tests.

8.6.1 Audio Test

The screenshot shows a web interface for audio testing. It has a header bar labeled 'Test'. Below it, there are three distinct test sections, each with a title and a 'Start Test' button. The first section is 'Speaker Test', the second is 'Intercom Microphone Test', and the third is 'Ambient Noise Microphone Test'. The buttons are blue with white text.

Audio Test Settings

- **Speaker Test:** Click Start Test, and the device will play a ringtone to verify that the speaker is functioning properly. If the test is successful, audio should be heard from the speaker.
- **Intercom Microphone Test:** Click Start Test, then speak toward the device. The system will perform a microphone-to-speaker playback test, and your voice should be played back through the speaker.
- **Ambient Noise Microphone Test:** Click Start Test to begin detection. A waveform will be displayed on the screen, allowing users to visually confirm whether the microphone is capturing ambient sound properly. This test is ONLY effective when the Ambient Noise Compensation feature is enabled.

8.6.2 Text Test

The image shows a web-based configuration interface titled "Text Test". It contains a sub-header "Text Test" and a text input field labeled "* Display Text:" with the placeholder text "Maximum number of display characters:64.". Below this is a "Background Color:" label next to a blue color selection box. Underneath is a "Duration(Sec):" label next to a numeric input field showing "10", with minus and plus buttons for adjustment. At the bottom are two blue buttons: "Clear Display" and "Submit".

Text Test

Text Test

* Display Text: Maximum number of display characters:64.

Background Color: v

Duration(Sec): 10 - +

Clear Display

Submit

Text Test Settings

- **Display Text:** Set the text content to be displayed on the screen for preview.
- **Background Color:** Set the background color for the display preview.
- **Duration(Sec):** Set how long the preview will be displayed.

8.6.3 Additional Test

Additional Test

Dry Contact Output Test

Test

Strobe Light Test

Test

Additional Test Settings

- **Dry Contact Output Test:** Click Test to trigger the relay output and verify that the dry contact interface is functioning properly.
- **Strobe Light Test:** Click Test to activate the strobe light and verify its behavior.

9. Reports

9.1 Call Logs

Call Logs allows you to check the call related information such as Call Date, Time, Account, Telephone Number, Call Duration, Call Type and Status. Please go to **Reports --> Call Logs** page to view the logs.

9.2 System Logs

System Logs allows you to check the event related information such as Operating Time, Operating Type (MQTT, Function, SIP, Multicast...), Event and Action details. Please go to **Reports --> System Logs** page to view the logs. Click the Download button and the .csv log file will be saved on your computer.
